

Figure 2 shows that the quantum efficiency decreases in samples 3 and 4 (yellow-brown EVA solar panel samples) for wavelength between 350-650 nm. Figures 1 and 2 have similar results in loss of ...

Perovskite-based solar devices offer higher conversion efficiencies than silicon. The only problem is that some of the most promising perovskites, namely caesium lead triiodide (CsPbI<sub>3</sub>), are very unstable at room temperature. Under these conditions, they have a yellow colour, as the atoms in the crystal do not form a perovskite structure.

Are you looking for tailor-made, 100% financed solution to achieve your energy transition? With its decarbonization platform, GreenYellow is your partner in your energy transition.
