

All of it was using Induction Matrix from like 4M rf to like 400M++rf .I had a lot of fun manging power on this playthrough since on my usual playthrough I would use draconic energy storage for power. That's why Enigmatica 2 Expert is one of my favourite 1.12 packs right now. Thank you very much for making it :)

Hi! I have been playing on a modded survival world on 1.7.10 for a little bit now and i have completely filled a tier seven draconic energy core (2.14 Trillion Power)! I am wondering if there is any way to either add another mod or make something that can store even more power than just simply making another core (which I don't want to do ...

I upgraded my Tier 7 energy storage to a Tier 8 when I filled up the Tier 7. I left the stabilizers and the energy core alone and just replaced the blocks needed to upgrade. ... Draconic-Inc / Draconic-Evolution Public. Notifications Fork 157; Star 309. Code; Issues 24; Pull requests 5; Actions; Projects 0; Wiki; ... however everything is still ...

Increases your Health Recovery by 258 for each Draconic Power ability slotted. Draconic Power Rank 22-----Rank II: WHILE USING DRACONIC POWER ABILITIES. Increases your Health Recovery by 258 for each Draconic Power ability slotted. Draconic Power Rank 36-----Scaled Armor: Passive: Rank I: Increases Physical and Spell Resistance by 825; Draconic ...

Hey! So, I just created a decent sized big reactor (15 x 15 x 15) and it is generating up to 132k rf a tick. Pretty cool stuff, ok, but I need to transfer it into my energy core, and ender IO conduits aren't very fun. before, I used to use ender conduits, but now, I need about 6 different lines of them, and If I ever need to expand, or If I wanna make a maximum sized one, I would need like 50.

Yup. You can connect Flux Points to fluxducts directly without a buffer etc. The storage items are pretty simple: put down the storage and select your network. It'll start pulling and sending power from that network. You can't make a multiblock structure like EnderIO capacitors btw. But you can connect multiple storage units to same network.

draconic evolution multi-block storage question . ... If you break the core with a pick it will lose its power. However, you can use a Thaumcraft wand focus of dislocation to move the core block without losing any power that it may contain, and then ...

top tier draconic equipment takes many megaRF to create/charge. ever strip mined with RFTools Builder? it will eat as much power as you give it. some RFTools Dimensions take 50-100k rf Per Tick to maintain. (just a couple examples off the top of my head) Draconic energy storage is great. really wish/hope it gets updated soon.

On both the infinite capacitor and Draconic energy pylons, WAILA shows them as having the 2.147 billion RF amount as their max RF storage. Whenever they hit that mark, they reset to zero stored RF. Steps to reproduce: Tried tier 6 and 7 Draconic core as well as Overloaded infinite capacitor with the same outcome.

There's an issue with dumping power into the draconic storage where the flux point won't exceed the integer max value (~2 BN) as it fills up the storage. To bypass this you can use the draconic energy xfer nodes, one on the flux point and one on the energy intake pylon. I haven't had a problem with flux plugs pulling power out.

A problem came up when it came to outputting power stored within the core. For context, I'm using mekanism universal cables (Top tier) and quantum entangloporters that all connect to the two pylons, one being set to input power to the core and the other being on an output. ... [Stoneblock 2] Flux Network and Draconic Core upvote ...

Another cool method of storing power at truly insane densities would be a DSU full of bedrockium drums of hot CO2 from ReactorCraft. Much like fish, you then have to convert the hot CO2 into energy with the appropriate setup but  $(2^{31}) * 65,536,000$  mB of Hot CO2 running through a nicely efficient boiler/turbine setup will make a monumental amount of power.

Draconic Evolution Energy Storage bug? So, I've built a Tier 4 Energy Storage multiblock today. Everything worked fine and it's charging like it's supposed to. ... They have a bug that causes the power storage reset. You can still use it, but put it behind a flux gate topped at 20krf/t

A problem came up when it came to outputting power stored within the core. For context, I'm using mekanism universal cables (Top tier) and quantum entangloporters that all connect to the two pylons, one being set to input power ...

Failing that, I'd set up and test a storage device (ex: Vibrant Capacitor Bank) and power the injectors ONLY from that, using different things. ... I'm playing a different mod pack, but DE should be DE should be DE. I'd try Draconic Evolution power first (crystals), if that didn't work, I'd try Flux plug/point network, and if that didn't work ...

What I am currently doing is squirt a small amount of the power (about 3000 RF/t through a Thermal Expansion Energy Cell (used as a regulator)). This 3000 RF goes into my already full Draconic power storage (I think its only tier 3), then what remains (roughly 21kRF/t) goes to my laser drill and 2 ender quarry set ups.
