

What is the energy sector in Cape Verde?

Cape Verde energy sector is strongly characterized by consumption of fossil fuels (derived oil-primary imported oil), biomass (wood) and use of renewable energy particularly wind and solar power.

Does Cape Verde have solar power?

In 2012 Cape Verde had an installed electricity generation capacity of around 300 MW, of which about 24% from wind power plants and 3% from photovoltaic stations. While solar power has an enormous potential as a source of renewable energy, natural conditions in Cape Verde are one of the best in the world for the production on wind energy.

Is Cape Verde a viable alternative to fossil fuels?

Solid waste can also represent an adequate option while ocean and geothermic energy are being tested, with uncertainties remaining as to their efficiency. Cape Verde has an estimated potential of 2,600 MW of renew-able energy, and more than 650 MW have been studied in concrete projects, which have lower production costs than fossil fuels.

What is the EU - Cape Verde special partnership?

The EU - Cape Verde Special Partnership was approved by the Council at the end of 2007 and is now in its implementation phase on the six priority sectors: governance, security, information society, regional integration, normative and technical convergence towards EU standards and fight against poverty.

Instalacja off grid to system energetyczny działający niezależnie od sieci publicznej. Panele fotowoltaiczne wykorzystywane są do produkcji elektrycznej, którą następnie przechowują akumulatory. Zapewnia to pełną autonomię energetyczną, użytkownik jest podłączony do zewnętrznej sieci. Magazynowana prąd nie jest wykorzystywany ...

Choć instalacja off grid wiąże się z wysokimi kosztami początkowymi, w dłuższej perspektywie może przynieść znaczne oszczędności i korzyści dla środowiska. Warto jednak pamiętać, że w przeciwieństwie do systemów on-grid, nie ma możliwości sprzedaży nadwyżek energii do sieci.
