

How much energy does Cabo Verde have?

Cabo Verde has ample sunshine with an energy/day ratio of 6-8 Wh/m²/day. Wave: Cabo Verde has potential for ocean power that is yet to be exploited; the mean value of energy carried by Atlantic Ocean waves is 20-70 kW/m per wave front. Geothermal: Geothermal is another potential energy source, but its exploitation is limited by scale.

What percentage of Cabo Verde's energy comes from imported petroleum products?

Includes a market overview and trade data. Imported petroleum products constitute about 80 percent of Cabo Verde's total energy supply, while less than 20 percent comes from renewable sources, primarily wind and solar.

Does Cape Verde have solar power?

In 2012 Cape Verde had an installed electricity generation capacity of around 300 MW, of which about 24% from wind power plants and 3% from photovoltaic stations. While solar power has an enormous potential as a source of renewable energy, natural conditions in Cape Verde are one of the best in the world for the production of wind energy.

What is the energy sector in Cape Verde?

Cape Verde energy sector is strongly characterized by consumption of fossil fuels (derived oil—primary imported oil), biomass (wood) and use of renewable energy particularly wind and solar power.

Is Cape Verde a viable alternative to fossil fuels?

Solid waste can also represent an adequate option while ocean and geothermic energy are being tested, with uncertainties remaining as to their efficiency. Cape Verde has an estimated potential of 2,600 MW of renewable energy, and more than 650 MW have been studied in concrete projects, which have lower production costs than fossil fuels.

Does Cabo Verde have a wind farm?

Wind: Cabo Verde has relevant experience in the sector, including through a public-private partnership called Cabeolica. Energy generated by wind turbines feeds the national grid on several islands. Cabo Verde offers good and reliable wind resources (18m/s).

Cabo Verde plans to undertake a major shift towards the low-carbon economy by increasing the share of renewable energy sources in the electricity supply from 18% to 30% in 2025, at least up to 50% in 2030. With adequate support, Cabo Verde has indicated that the target for the share of renewable energy sources may go up to 100% by 2040.
