

Will CATL expand battery swapping in China in 2025?

Global battery maker CATL says it will expand its electric vehicle battery swapping in China in 2025.

Will China get a big electric car battery swapping boost in 2025?

China's getting a big electric car battery swapping boost in 2025. Would that work across the globe? A first generation battery swapping station by China-based CATL battery manufacturing company, is seen in Xiamen, Fujian province, China, Wednesday, Dec. 18, 2024. (AP Photo/Ng Han Guan)

Is China a leader in electric vehicle battery technology?

China is dominant in every aspect of electric vehicle battery technology. Now the rest of the world is trying to catch up. SCOTT SIMON, HOST: When it comes to supply chains for the electric vehicle industry, China is far ahead for the number of batteries and EV cars that it produces.

Does China still make electric car batteries?

China's dominance in the battery market is staggering. According to SNE Research, more than half of all electric car batteries built in the world come from Chinese companies, with CATL alone accounting for over one-third of global production. And it's not just about factories in China anymore; Chinese firms have set up shop in Europe too.

How many battery swap stations are there in China?

The company aims to establish 1,000 battery swap stations across China, including in Hong Kong and Macau, with a long-term objective of building 10,000 stations in collaboration with its partners. Battery swapping offers a rapid alternative to traditional EV charging.

Will China build a solid-state battery supply chain by 2030?

Aiming to build a supply chain for solid-state batteries by 2030, Beijing in January set up a consortium, the China All-Solid-State Battery Collaborative Innovation Platform (CASIP), which brings together government, academia and industry, including EV battery rivals CATL and BYD.
