

How much energy does Latvia use?

Latvia is a net energy importer. Primary energy use in Latvia was 49 TWh, or 22 TWh per million persons in 2009. In 2018, electricity consumption per capita was 3731 kWh. Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030.

Will electricity be the cornerstone of Latvia's energy transition?

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the target of 57% renewables in total final consumption by 2030.

What are the different types of energy sources in Latvia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Latvia: How much of the country's energy comes from nuclear power?

What are the different types of energy transformation in Latvia?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Latvia for 2022. Another important form of transformation is the generation of electricity.

What is a hydro power station in Latvia?

Hydro is an important power source in Latvia, eg. the Riga Hydroelectric Power Station is the oldest hydro power station in the country, built in 1940. It was agreed in 2018 that Estonia, Latvia and Lithuania would connect to the European Union's electricity system and desynchronize from the Russian BRELL power system.

How can wind and solar power projects help Latvia?

Bringing wind and solar power projects online will also help reduce Latvia's dependence on natural gas imports and can contribute to lower electricity prices; current efforts to develop offshore wind will support this outcome.

It will produce 120,000 MWh of clean electricity per year, enough to meet the needs of 57,000 Latvian homes. European Energy executive vice-president and project development head Thorvald Spanggard stated: "With its high capacity, the green power generated in Broceni will significantly contribute to our nation's energy grid, catalysing Latvia's shift ...

Electricity will be the cornerstone of Latvia's energy transition. Latvia's hydro-dominated electricity system provides a favourable starting point to use clean electricity to decarbonise other economic sectors and meet the

target of 57% ...

RIGA, Aug 14 (LETA) - In January-July 2024, Latvia generated 4,362 gigawatt-hours (GWh) of electric power, up 4.4 percent from the same period last year, according to an electricity market review released by Augstsprieguma Tīkls transmission system operator. Hydroelectric power plants on the Daugava River generated 2,695.5 GWh of electric power, which is a decrease of ...

Gas Power Plants in Latvia. Latvia generates gas-powered energy from 2 gas power plants across the country. ... According to the International Energy Agency (IEA), natural gas-fired power plants generated approximately 7,807 terawatt-hours (TWh) of electricity worldwide in 2020, which accounted for around 23% of global electricity generation. ...

Latvia - Energy and power ... when 30% to 40% of Latvia's power must be imported, mostly from Estonia and Lithuania. All three plants underwent modernization at the end of the 1990s. In addition, the Kegums hydropower plant, built in 1939, was renovated and reopened in 2001, having been made operable for another 40 years. ...

RIGA, Oct 16 (LETA) - In January-September 2024, Latvia generated 4,969 gigawatt-hours (GWh) of electric power, up 5.8 percent from the same period last year, according to an electricity market review released by Augstsprieguma Tīkls (AST) transmission system operator. Hydroelectric power plants on the Daugava River generated 2,849 GWh of electric power, ...

Olga Bogdanova is the president of World Energy Council Member Committee Latvia. She is a Deputy Chair of the Supervisory board of the Power Transmission System operator of Latvia AS "Augstsprieguma tīkls" holding the controlling stock of the Latvian gas transmission and storage system operator.

Official statistics of Latvia. Official Statistics Portal of Latvia. Latvian; English; Search. Search. Menu. ... Energy Balance 2023, in Latvian PEN2401. Load more. Press releases ... REN2402. 02.07.2024 In 2023 hydropower, wind power and solar power plants generated 44.3 % electricity more than a year ago. REN2401. 28.05.2024 Number of CHP ...

Renewable energy has been a widely-discussed issue in Latvia for more than 15 years, however, as the climate change progresses, renewable energy technologies play a central role on both the Latvian and global agenda, providing a sustainable and low-carbon solution for the global challenge. ... 5.18 for fossil power plants and 0.27 for wind ...

From November 2023 to October 2024, Latvia's electricity consumption predominantly leaned towards low-carbon energy sources, with a noteworthy share of over 64% originating from clean energy production. Hydropower played a significant role, contributing to more than half of the low-carbon tally, at approximately 50% of total electricity consumption. . Other low-carbon sources ...

Latvia currently has no nuclear power facilities. What they're saying: "We are pleased to be working with Latvia to explore what role advanced nuclear technologies can play in Latvia's future energy mix," said Bonnie Jenkins, the State Department's undersecretary for arms control and international security. "The United States and ...

Latvia 2024 Energy Policy Review . 1. General energy policy. Overview . Latvia's energy system is relatively well diversified, with sizeable shares of - renewables in the form of hydro and bioenergy. Its electricity system, in particular, is dominated by hydropower. The largest energy-consuming sector is buildings, followed by transport.

Latvia's energy transition is poised for renewed momentum. ... Bringing wind and solar power projects online will also help reduce Latvia's dependence on natural gas imports and can contribute to lower electricity prices; current efforts to develop offshore wind will support this outcome. The government will likewise need to clarify the ...

VENTSPILS, Latvia, Nov. 6, 2024 /PRNewswire/ -- On November 1, 2024, T?rgale Wind Park held its grand opening, unveiling Latvia's first major energy storage facility. Hoymiles, as a key ...

RIGA, Jan 21 (LETA) - In 2021, Latvia generated 5,609 gigawatt hours (GWh) of electric power, which is an increase of 1.8 percent against 2020, according to an electricity market review released by Augstsprieguma Tikls transmission system operator. Hydroelectric power plants on the Daugava River generated 2,620 GWh of power in 2021, up 4.2 percent against a year ...
