

What makes enlighten battery unique?

Enlighten's battery combines three technical breakthroughs: a proprietary catholyte system and Infinite Anode(TM) technology both of which are enabled by a NaSICON TM solid state separator. Enlighten's proprietary catholyte system uses low-cost, high-energy density commodity chemicals that are readily available around the world.

Is Enlighten NASICON ready for manufacturing scale-up?

NaSICON is commercial and ready for manufacturing scale-up. Enlighten's long duration energy storage (LDES) decouples power and energy. It allows storage capacity to match market requirements. NaSICON provides higher energy density than other flow battery technologies and beats Li-Ion on cost at 7+hours.

What is NASICON & enlighten?

NaSICON enables low temperature, high conductivity and selectivity of sodium ions which are in a class above traditional sodium separator materials. NaSICON is commercial and ready for manufacturing scale-up. Enlighten's long duration energy storage (LDES) decouples power and energy. It allows storage capacity to match market requirements.

I see a new function on the battery charge from grid screen. Mine is set for charge when under 30%..... the charge to 100% during this schedule is not checked. Every night at midnight the batteries start charging and continue until they get to 100%. This function does not appear to be working correctly. By charging at night there is little to charge in the day.

The number of carbon emissions you will offset will depend on the size of your solar system. Larger solar systems will offset more emissions. The Environmental Protection Agency has the formula to calculate the number of carbon emissions that your system will offset: 7.44×10^{-4} metric tons CO₂ / kilowatt-hour of energy produced. Even a smaller 2-kilowatt system can ...
