

Does Estonia still use fossil fuels?

Energy in Estonia has heavily depended on fossil fuels. Finland and Estonia are two of the last countries in the world still burning peat. Estonia has set a target of 100% of electricity production from renewable sources by 2030 and climate neutrality by 2050.

How can Estonia improve its energy reliance on oil shale?

"Estonia is making great strides to reduce its reliance on oil shale and boost deployment of wind and solar generation" said IEA Deputy Executive Director Mary Burce Warlick. "It now needs to build on this success and accelerate the energy transition by aligning fiscal measures with its medium and long-term energy and climate goals.

What are Estonia's ambitious energy goals?

Estonia's ambitious targets require accelerated renewables deployment, increased electrification and phasing out oil shale generation while ensuring a just transition that maintains energy affordability and supports economic development in the oil shale region.

Who owns Eesti Energia?

The main raw material for energy production - oil shale - is extracted from mines located in Eastern-Estonia and owned by the company. The group of Eesti Energia has three main operation areas: electricity generation, shale oil production, and sale and distribution of electricity. Its shares are owned by the Government of Estonia.

Why is the IEA Energy Policy Review important for Estonia?

This IEA Energy Policy Review comes at a critical moment for Estonia, which is facing notable challenges amid the climate and energy crises and the Russian Federation's invasion of Ukraine.

Can Estonia be a leader in energy sector digitalisation?

A European technology hub, Estonia will have an important role to play as a leader in energy sector digitalisation that can serve as a template for other countries, according to the report.

FPL Pelican Solar Energy Center is a ground-mounted solar project which is spread over an area of 955 acres. The project supplies enough clean energy to power 15,000 households. The project cost is \$110.761m.  
Development Status

For warm homes, street lighting or to drive cars we need energy, which can be obtained from renewable and non-renewable sources.
