

Access to a secure and affordable energy supply is a prominent prerequisite for economic growth of a developing country like Ethiopia. With a formidable dependency on hydropower, renewable generation is increasing from the current 0.3 GW of wind capacity to 2.4 GW by 2025, before reaching 3.6 GW by 2030.

Ethiopia: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Studies on renewable and green energy systems and sources include: Research on wind, solar, and biomass energy conversion systems; Renewable resources potential assessment, energy storage; Energy-saving and efficient technologies; Stirling heat pumps; Human energy acquisition; CO₂ capture storage and utilization; Energy conversion systems;

This two-volume set constitutes the refereed post-conference proceedings of the 8th International Conference on Advancement of Science and Technology, ICAST 2020, which took place in Bahir Dar, Ethiopia, in October 2020. The 74 revised full papers were carefully reviewed and selected from more than 200 submissions of which 157 were sent out for peer review.

ICAST helps underserved communities by providing clean energy services, improving housing affordability, and offering workforce training to at-risk youth. Our work environment is: Collaborative, entrepreneurial, fast-paced, and inclusive, with a good work/life balance, flexible schedules, opportunities to job shadow, robust onboarding, and ...
