

How is electricity produced in Finland?

Electricity is produced in Finland in a versatile way with various different energy sources and production methods. The most important energy sources for electricity generation are nuclear power, hydropower, wood fuels and the fast-growing wind power sector.

What is the electricity sector in Finland?

The electricity sector in Finland relies on nuclear power, renewable energy, cogeneration and electricity import from neighboring countries. Finland has the highest per-capita electricity consumption in the EU. Co-generation of heat and electricity for industry process heat and district heating is common.

What is the fastest growing source of electricity in Finland?

Wind power in Finland has been the fastest growing source of electricity in recent years. In 2023, Finland covered 18.2% of the yearly electricity demand with wind power production, which was 18.5% of the domestic production. Wind capacity was up 1.3 GW from the previous year and wind production up 25%.

Does Finland have a free electricity market?

Finland is part of the European electricity market, which is subject to free competition. In addition to energy sources, production can be divided according to the kind of power plant the electricity is generated in (e.g. whether it is a heating plant or other production) and how the generation takes place timewise.
