This connection wires solar panels in series by connecting positive to negative terminals to increase voltage and connects these strings in parallel. All solar panel strings connected in parallel have to feature the same voltage, and they also have to comply with the NEC 690.7, NEC 690.8(A)(1), and NEC 690.8(A)(2).

Until now, connecting utility-scale solar projects to the distribution grid at the lower voltages found in those networks has been typical. However, two factors are driving the emergence of transmission-connected solar.

Firstly, as the installed capacity of projects has increased, there has also been a steady progression in the voltage levels ...
