

Why is Iran Facing a gas crunch?

The gas crunch adds to the growing list of strains on Iran's economy. The country is one of the world's biggest oil and gas producers, but has been plagued by significant energy shortages caused by years of US sanctions and chronic under-investment in power infrastructure. The government is also under pressure internationally.

How much gas is consumed in Iran?

Gas consumption in homes, businesses and small industries hit a record high of 640 million cubic metres in the past 24 hours, registering an increase of 18 per cent compared with the corresponding period of last year, according to Tasnim news agency. The gas crunch adds to the growing list of strains on Iran's economy.

Is smog causing pollution in Tehran?

Many provinces have been experiencing freezing temperatures and heavy snowfall, with the cold snap trapping pollution in cities including the capital Tehran, which has been engulfed by a thick layer of smog.

Why did Trump reimpose sanctions on Iran?

During Trump's first presidency, he waged a campaign of "maximum pressure" on Iran and reimposed tough sanctions over its nuclear programme. Pezeshkian called on Iranians to work together to resolve problems facing the country rather than relying on him alone to shoulder the burden.

Iran emits over five million tons of CO 2 a year from coal electricity generation alone. Nuclear energy, however, does not emit CO 2 or other greenhouse gases. If Iran can obtain a reliable source of enriched uranium, Iran has plans that will reduce its CO 2 emissions by 9 million tons--the equivalent of taking 1.7 million cars off the road.
