

What is the Adden Energy EV battery?

Adden Energy, a battery company founded in 2021, develops innovative solid-state battery systems for use in future electric vehicles (EVs). The solid-state battery from Adden Energy can fully charge in just 3 minutes and offers over 10,000-lifetime cycles.

Are EV batteries a game-changer?

Adden Energy has scaled up the technology to build a smart phone-sized pouch cell battery. This is yet another milestone achieved in the solid-state battery saga. The ultimate challenge is still bringing them to mass-production at a lower price than lithium-ion batteries. That will be the real game-changer for EVs.

Will Adden energy reach EV parity by 2028?

Adden Energy says its next-generation batteries are on track to reach the goal of EV parity with internal combustion engines by 2028.

Adden Energy | 2,297 followers on LinkedIn. A Harvard University spin-off commercializing novel solid-state battery technology | The problems posed by climate change need no introduction - it is one of the most pressing challenges of our era. Rapid development of clean energy storage technology is critical to combating this plague. In fact, electrification of the world's vehicle fleet ...

Adden Energy Announces World's Fastest Lithium Metal Battery Has Achieved Breakthrough Low Temperature Performance. Adden Energy, a leading developer of solid-state batteries, announces that its record-breaking lithium metal batteries can now maintain extreme-fast-charging (EFC) of less than 10 minutes at room temperature.

Adden Energy, a leading developer of solid-state batteries, announced that its lithium metal batteries can now maintain extreme-fast-charging (EFC) of less than 10 minutes at room temperature. No other lithium metal batteries can reliably charge this fast even at elevated temperatures, nevertheless at the room temperature required for electric vehicles (EVs).

Adden Energy's breakthrough in lithium-metal solid-state battery technology is a game changer for the electric vehicle market. The elimination of dendrites and self-healing capabilities positions these batteries to outperform current lithium-ion batteries in range, safety, and charge time, addressing major consumer concerns.

The start-up Adden Energy, founded by scientists at Harvard University, is developing a new type of solid-state battery for electric vehicles and has now announced that it has received a technology licence and closed a ...

Adden Energy develops the technology that enables solid-state lithium metal batteries with high capacity, stable cycling, high-rate, and high current density capabilities, based on the new design principles for ...

(Image Credit: Adden Energy) Harvard researchers developed a new coin-cell battery prototype that achieves a full charge in just three minutes with over 10,000-lifetime cycles. The team's startup, Adden Energy, received ...

Start-up Adden Energy has innovated a battery for electric cars that promises to achieve full charging in three minutes and also lasts two decades. The start-up announced that it has received the grant of an exclusive technology license by Harvard University's Office of Technology Development (OTD) and a seed round financing of \$5.15 million.

The battery is also self-healing which means its design and chemistry allow it to backfill holes created by dendrites. Now, Adden Energy will advance the technology as they have achieved 5,000 to 10,000 charge cycles in a battery's lifetime compared to 2,000 to 3,000 charging cycles of traditional EV batteries.

Adden Energy is a startup headquartered in Waltham, Massachusetts, that was founded to revolutionize electric vehicle (EV) batteries. They have developed an innovative solid-state lithium-metal battery designed ...
