

Isle of Man The latest methods of storing electricity

How much electricity does the Isle of Man need?

Therefore, the Isle of Man currently requires (as a minimum) a generation asset with capacity up to 30MW for use during peak-demand to produce an estimated 15.3 GWh per year. Therefore, 15.3 GWh would be required from domestic generation, which would represent 3.5% of current electrical generation and reducing total CO₂e emissions by c.23%.

Is the Isle of Man suitable for an offshore wind farm?

• The Isle of Man Government signed an Agreement for Lease at the end of 2015, giving • the right to investigate an area within the Isle of Man Territorial Seas, approximately 6-12 nautical miles off the east coast of the Island, to determine its suitability for an offshore wind farm.

Can the Isle of Man be a green energy leader?

The Isle of Man has a tremendous opportunity to be a global leader in the green energy transition. We have all seen the impact that climate change is having in nations around the world. From rising sea levels to winter flooding and summer heatwaves, the impacts of climate change are real and happening now.

Can the Isle of Man provide stabilising power to GB or ROI?

Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export. These options have not been explored in the analysis.

Will the Isle of Man be short of baseload power?

Both UK and RoI are predicted to become short of baseload power over the next decade. Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export.

Does the Isle of Man have an AC interconnector?

There is an AC Interconnector (AC I-C) connecting the Isle of Man to the UK. With an undersea section of 104 km, it is the longest AC cable in the world. It was laid in 1999 between Bispham (UK) and Douglas (IOM) and commercial operations commenced in November 2000. It was initially capable of continuous operation of 40 MW at 90 kV.
