Battery-Based Grid-Tie Inverter. Hybrid solar systems utilize battery-based grid-tie inverters. These devices combine can draw electrical power to and from battery banks, as well as synchronize with the utility grid. Solar meter. Essentially, a solar meter is a device that is used to measure kWh production from a solar system.

The first part is the power optimizer, which handles DC to DC and optimizes or conditions the solar panel's power. There is one power optimizer per solar panel, and they keep the flow of energy equal. For example, with a standard string inverter, if one solar panel produces less energy, all the solar panels in that string will produce less energy.
