

Does Macao have solar energy?

Clearly, Macao has a tremendous potential for developing solar energy, especially a grid-connected photovoltaic system. Its small and densely populated area, however, make it unsuitable for large-scale solar-power plants, and Macao has therefore chosen roof-top solar technology as the most effective way to utilize solar energy.

Can Macao increase solar energy?

The Macao government also sees an opportunity to increase solar energy. To encourage the installation of PV systems, officials passed a set of safety and installation regulations in 2015.

Does Macao have a photovoltaic energy contract?

The regulations require investors to enter into a 20-year contract for the purchase of photovoltaic energy with Macao's sole energy service provider, Companhia de Electricidade de Macau (CEM). Essentially CEM will purchase the electricity produced to ensure investors profit within a reasonable period.

Does Macao use a lot of energy?

Under such circumstances, energy consumption in the transportation section has significantly increased in Macao. Increasing the use of public transit is a very efficient strategy, since on average it uses less energy per passenger-mile than most commercially available vehicles.

How can Macao achieve energy sustainability?

Therefore, Macao needs to both continue and improve energy-saving education, especially in elementary schools, to foster energy-saving habits in childhood. Efficient use of energy in buildings and in the transportation sector is the key to attaining energy sustainability in the city of Macao.

Does offshore wind energy make sense in Macao?

"In our view, as external observers, offshore wind energy in Macao's territorial waters makes sense, as does the development of distributed generation of photovoltaic energy. Macao has a lot of sun and many roofs. There is a potential to develop this vector in the medium-to-long term."

According to The Macau Post Daily, GDSE Director Arnaldo Ernesto dos Santos made the remarks to the media on the sidelines of a seminar, which was organised by the Institute of Electrical and Electronics Engineers of Macau (IEEE Macau). The seminar, held at the Macau Science Centre in Nape, discussed the use of solar power for a greener community.

Power consumption in the primary and tertiary industries rose 8.6 percent and 4.4 percent year on year, respectively. Residential power consumption logged a year-on-year decline of 9.2 percent. In the first two months, the country's power use increased 2.3 percent year on year to 1.38 trillion kilowatt-hours.

Over the past decade, the city's total electricity consumption has increased by nearly 55 percent, in large part due to the completion and commissioning of a succession of large-scale infrastructure projects and casinos coupled with the rise in smart tech used by homes and businesses. As Macau's power supply network consists of underground ...

If your solar panels make more power than your house uses, you can sell your extra power back to the grid. Companies that install residential solar power tout this benefit as an easy way to recoup your investment, and it would be attractive to buyers, but the results can vary (as do the laws governing what the utility companies can do ...

Please remember that these are broad estimates and can run higher or lower than reality. Location and lifestyle habits contribute strongly. For example, if you have a five-person, 4,000-square-foot household and continually run central air, your monthly kWh usage could reach at least 5,000.

The scenarios below are designed to provide guidance to organizations that have--or are considering installing--on-site solar systems. The scenarios can provide these organizations with examples and rationale for the types of claims they can legitimately make pertaining to their "use" of solar power and any associated carbon footprint reduction claims.
