

How can Reunion Island achieve energy autonomy?

Reunion Island aims to achieve energy autonomy and a 100% renewable electricity mix by 2030. Without policy support, the share of renewables remains at the 2008 reference level. The development of biomass, particularly energy cane, is economically interesting. Solar and marine energy need political and/or economic support to be developed.

Can Reunion Island make its electricity 100% renewable?

Reunion Island's plan for making its electricity system 100% renewable involved a multi-fold process. This ambition was established in the law "Grenelle 1" No. 2009-967, whereby the French Ministry of Ecology mandated in April 2009 that all new constructions in overseas departments must install solar water heating.

How did Reunion Island get its electricity?

Concluding discussion During the 1980s, Reunion Island's entire electricity supply came from renewable hydropower. As the population grew and quality of life improved, coal and oil were introduced to help meet increasing demand.

How does Albioma produce electricity in Reunion Island?

As the leading electricity supplier in Reunion Island, Albioma produces 46 % of the energy available in the grid by operating two thermal biomass power plants, a bioethanol combustion turbine and a large photovoltaic fleet.

Can geothermal energy be developed on Reunion Island?

Geothermal energy also presents significant potential for development, with an installed capacity of 30MW; however, the main problem for this resource on Reunion Island is its location in a protected natural area.

Does Reunion Island need economic support?

The development of biomass, particularly energy cane, is economically interesting. Solar and marine energy need political and/or economic support to be developed. Reunion Island, a French overseas region located in the Indian Ocean, is facing a three-fold challenge combining demographics, the environment and energy.

2MW Wave Energy for Local Consumption Wave to Energy Project in Saint-Philippe, La Reunion
Visual integration of an INWave wave energy array in Saint-Philippe, La Reunion Installed ...

TwInSolar aims at enhancing research and innovation to reach a massive integration of solar renewables in Reunion Island, a French outermost region located in the Southwest Indian Ocean Sea basin.

These last years, with the new law on energy transition and a local multi-annual programming on energy,

Reunion Island is being pushed towards an ambitious goal: to increase its share of renewables to 50% in its electricity production by 2020 and to 100% in 2030. The evolution of the energy mix of this overseas region is already noticeable.

Our locations > Reunion Island. Autonomous solar electric vehicle charging station. Type: Solar power plant Installed since: 2022 Installed ... Twelve vehicles are recharged each day to more than 85% with solar energy, thanks to its photovoltaic shade (about 40 kWp) and its batteries which allow solar energy to be distributed throughout the day

Predefined load profiles for solar power plants, as well as short-term solar irradiance forecasts allow for better planning and minimizing the curtailment of available solar energy. Thanks to the strong growth of ...

Reunion Island's electricity self-sufficiency represents a significant challenge due to the island's limited land area and high energy consumption levels. Considering a 2050 time horizon, four scenarios have been investigated to reach electrical energy autonomy. The Base scenario includes generation with a high proportion of dispatchable ...

for renewable power generation. Reunion Island is endowed with many types of renewable energy sources (RES) such as solar, wind, geothermal, sea energy (ocean thermal energy conversion and wave energy), ... capacity of photovoltaic solar energy was 186,6 MW [2]. To meet the autonomy target, more PV farms connected to the grid will have to be ...

This situation gives rise to good potential for RES, since most RES are indirect solar energy forms such as biomass, wind, ocean, etc. The evolution of the electricity mix in Reunion is linked closely to its history. Electricity was first generated on the island in the 1920s.

Reunion island is blessed with many types of renewable energy sources (RES) such as solar, wind, geothermal, sea energy (Ocean thermal energy conversion and wave energy), biomass and hydropower. Leading to energy autonomy by 2030 mean a ...

09/22/2022 September 22, 2022. Reunion, a tiny French island in the Indian Ocean, wants to switch completely to green energy production by next year. To reach this goal, coal-fired power plants ...

In the heart of Reunion Island, a remarkable aquaculture project is making waves in the sustainable food industry. The Cèdres fish farm has pioneered an innovative approach to caviar production, harnessing the power of solar energy to create a unique ecosystem for sturgeon farming. This groundbreaking initiative not only showcases the ...

Following the success of its first edition, the TwInSolar consortium is pleased to announce the second TwInSolar Summer School, scheduled to take place in La R union from 18 to 22 November 2024.. This event is designed for researchers at all levels, including postdoctoral researchers and PhD students, who are

eager to deepen their knowledge and expertise in ...

Bridging the research gaps on solar energy to accelerate the energy transition in La Reunion ... are equipped with solar domestic hot water and PV represented approximately 25% of the total installed capacity of electricity generation in 2022. ... Stay informed of the latest news and events related to our TwInSolar project and solar energy in ...

See also: RÃ©union Energy. Electricity Generation in RÃ©union RÃ©union generates 2,744,000 MWh of electricity as of 2016 (covering 108% of its annual consumption needs). Non Renewable (Fossil Fuels) ... Solar 260,000 MWh (9.48%) Tide & Wave 0 ...

The mastery of photovoltaic energy conversion has greatly improved our ability to use solar energy for electricity. This method shows our skill in getting power in a sustainable way. Thanks to constant improvement, turning solar energy into electricity has gotten more efficient, meeting our increasing energy needs. Solar panels are key in this ...

As many other small island states, Reunion Island, a 2512 km² French overseas territories and collectivities (as Mayotte, Martinique, Guyana, Guadeloupe, Saint Pierre and Miquelon) located between Mauritius and Madagascar in the Indian Ocean, is facing a three-fold challenge combining demographics, the environment and energy. More precisely, energy ...
