

Saint Pierre and Miquelon solar water heater for home

What is a thermal solar collector for water heating?

In most cases, the thermal solar collector for water heating is arranged in a combination of parallel and series. Ideally, this maximizes the amount of energy it can get from the sun hence an efficient heating process. They are conduits that transport heating fluid and water throughout the system.

Where is solar water heater made?

Our factory is located Jianshan District, Zhejiang, China. It covers more than 20,000m² with over 200 company people. Each team and employee are well-trained to provide you excellent assistance to your needs. Among our products include different types of solar water heater such as flat plate, high pressure, non-pressure, split, heat pipe, and more.

How do you mount a solar collector for water heating?

When mounting the solar collector for water heating, ensure it is as close as possible to the storage tank. The mounting process for the solar collector in a DIY project involves: Determining the Tilt Angle: Use the site's latitude to calculate the tilt angle in order to maximize solar energy absorption.

How to make a solar water heater more efficient?

You can also add a reflective material like aluminum foil to your tank set-up. This enhances the absorption of heat within the water tank or container. These are not necessary and can be left out without hampering the performance of your DIY solar water heater.

Are sun solar heaters a good choice?

ENSUN is one of the leaders in solar heaters, which can significantly reduce energy bills and provide a great alternative to traditional energy sources. These solar systems are ideal for private homes and commercial properties, offering a wide range of products for different needs.

Can a solar water heater save money?

A solar water heater can help you save up to 80 percent of your heating bills, even in temperate climates. It may last up to 15 years lifetime. Temperature can raise from 20 °C to 80 °C in 6 hours. Renewable energy is used to generate hot water, it helps to reduce greenhouse gas emissions.
