

For context, lead-acid batteries have an RTE of about 70%. Lithium-Ion batteries for large energy storage, like those in many industrial-scale energy storage facilities and maybe even your home, have an RTE of around ...

Altern?, a startup specializing in sand-based battery technology, has successfully secured over \$1.5 million in funding. Prominent impact and venture capital funds, including The Radical Fund from Singapore and ...

The idea is to use the solar batch collectors to heat the sand with hot air during the late summer into the fall months. The water storage will maintain a constant temperature for heating the structure via the return ducts during the colder ...

Vietnamese startup Altern? has secured US\$1.5 million in an oversubscribed funding round to further develop sand-based batteries for agricultural energy storage solutions, aiming to reduce carbon emissions.

Altern? harnesses the power of sand to efficiently collect, store, and distribute heat, offering agricultural businesses a cost-effective drying method that could save up to 50%. Sand ...

The idea is to use the solar batch collectors to heat the sand with hot air during the late summer into the fall months. The water storage will maintain a constant temperature for heating the structure via the return ducts during the colder months. The fans to circulate the air will come from solar panels and batteries for night use.

Altern? is a venture capital backed Vietnamese startup that uses sand battery technology to efficiently convert electricity to thermal energy that can be stored in the sand at 600°C. The technology can have several uses including drying ...

The company from Finland promotes its storage system under the brand name Sand Battery, as the vessel is filled with sand. The first commercial Sand Battery with 8 MWh has operated as part of the district heating grid of the utility company Vatajankoski in the town of Kankaanpää, Western Finland, since July 2022 (see photo). The steel ...

Heat loss: Over time, sand batteries experience heat loss due to natural dissipation. This gradual heat loss can reduce the overall energy storage capacity of the system, necessitating periodic recharging to maintain optimal performance. Applications of sand batteries. Sand batteries have versatile applications in various sectors, including:

Altern?'s origin story is a testament to innovation, collaboration, and a shared vision for a sustainable future. Co-founders Hai Ho and Nam Nguyen, each bringing a rich tapestry of experiences in engineering, software

development, and environmental sustainability, crossed paths in a serendipitous meeting that would lay the foundation for Altern?.

Alterno Vietnam, a pioneering startup in energy storage solutions, has successfully raised \$1.5 million from the Schneider Electric Energy Access Asia (SEEAA) fund, along with contributions ...

Altern?, a Vietnamese startup providing a thermal energy storage solution utilising sand battery technology, has secured over US\$1.5 million in an oversubscribed seed investment round co-led by The Radical Fund (Singapore) and Touchstone Partners (Vietnam). Antler (Vietnam), Impact Square (Korea), and Glocalink (Singapore) also participated.

The term &quot;sand battery&quot; seemed to have come from BBC reporter Matt McGrath, a clever coinage that made it sound like something different and new. And it is different and new, just not in the way ...

The leading snack manufacturer in the world. Their main challenge is to find a zero-carbon solution for drying snacks that traditionally relies on carbon-intensive methods. Alterno's sand battery offers a clean, efficient alternative, allowing PepsiCo to reduce emissions and energy costs while aligning with their sustainability goals.

By making sustainable heating solutions accessible and affordable through sand battery technology, Altern? is enabling farmers to adopt greener practices, contributing significantly to Vietnam's goal of net-zero emissions and, equally importantly, reducing operational costs in the agricultural sector.

1. Introduction Solar and Wind power are periodically generating energy as soon as it is available instead of when it is required, henceforth demanding significant energy storage for an effective alteration to green energy. The possible manifestations of this could fluctuate importantly, including traditional lithium-based "large battery" systems, current batteries, silicon ...
