

How many MW of solar power are there in Estonia?

Since 2020 we have completed development and construction of more than 62MW of solar capacity. We have more than 744MW of ongoing projects around Estonia in different municipalities which will be completed by the end of 2024. We are also working to incorporate storage systems to provide electricity when the sun is not shining.

Will Estonia be fully solar powered by 2030?

Estonia has seen a significant increase in its solar power capacity in 2022, becoming one of the leaders in solar power per capita among EU members. With growing investments and innovative startups, it now aims to be fully green-powered by 2030.

How much solar power does Estonia have in 2022?

That makes another record-breaking year for solar on the continent, with a total of 10 GW more capacity added than expected. Regarding solar power per capita, Estonia has emerged as one of the new leaders. The country is ranked 6th among 27 EU members, with 596 Watt per capita in 2022, jumping from 405 in 2021.

Did Estonia introduce a new solar policy?

Yes, Estonia introduced a new policy for solar and renewables in June 2018. This policy led to the deployment of approximately 90 MW of solar power, bringing the cumulative capacity to around 107 MW by the end of 2018.

Why is Estonia installing 90 MW of solar?

The 90 MW of newly deployed solar in Estonia, according to Meesak, is due to a new policy for solar and renewables introduced by the Estonian government in June. "The Electricity Market Act was passed in parliament on June 6, the real race started after the market regulation was clear," said the solar body CEO.

Does Estonia have a good energy policy?

So far, it has been a key objective of Estonian energy policy. Being a Nordic country with less sunlight than in Western and Southern Europe, Estonia has achieved a solid place at the top with its 1,923 sunny hours in the year.
