

Are battery energy storage systems a viable alternative for Chilean power producers?

With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers.

How much does a battery cost in Chile?

In fact, batteries charged at nearly \$0/MWh during the day in the sunny, northern desert regions of Chile, sell energy at night for over \$100/MWh. Although projects such as Engie's BESS Coya are already enjoying these large spreads, this capacity payment will partially de-risk Chile's dependence on volatile, but still profitable, merchant revenues.

How long does a battery last in Chile?

Moreover, the lack of an ancillary services market in Chile discourages shorter duration batteries (1-2 hours) as seen in the US and Europe. The general industry consensus is to maximize the availability of the battery and focus on 2-3 revenue streams instead of 4 to 5 (e.g., energy arbitrage, capacity payment, and frequency reserve).

Who will supply battery systems?

Battery systems used will be supplied by Fluence, the energy storage technology provider co-owned by AES Corporation and engineering solutions company Siemens. Fluence said that its Sunstack modular battery storage solutions will be used - part of the company's sixth generation range of energy storage systems launched earlier this year.

Hello everyone This is my first question I am interested in setting up a LiFePo4 battery bank to expand the storage of my solar field. We built a small solar field to power the house (see signature) and (as friends had already told me "THIS PHOTO CHARACTERISTICS IS A MUST") the following year we bought a PHEV vehicle (Peugeot 3008) and the following year ...

In a historic milestone, AES Andes began commercial operations of Andes Solar IIb, a 180MW solar/112MW battery storage system - the largest in Latin America -- earlier this week. Located in the middle of the Atacama Desert, Chile, Andes Solar IIB boasts a capacity of 112MW for 5-hours of energy based on lithium-ion batteries.

The houses are ~150" apart from each other. Putting any kind of structure between them would obstruct "the view" and is not desirable. Yeah, the quotes have been in the 60-88k range and don't include batteries at all at that price, even if they pay their installers \$100/hr and it takes 40 hours of work to install, they are probably making 300+% profit margin.
