

What is the energy sector in Cape Verde?

Cape Verde energy sector is strongly characterized by consumption of fossil fuels (derived oil-primary imported oil), biomass (wood) and use of renewable energy particularly wind and solar power.

What is Cape Verde's 5 MW solar power plant?

The 5 MW solar power plant, located on the island of Santiago, was built with the support of the World Bank and the European Investment Bank (EIB). The project was part of Cape Verde's efforts to transition to a more sustainable and resilient energy system.

Can Cape Verde generate 50% of its electricity from renewable sources?

Cape Verde has set an ambitious target to generate 50% of its electricity from renewable sources by 2025. The REIUP project is expected to contribute significantly to achieving this target. In recent years, Cape Verde has made significant progress in promoting renewable energy sources.

Does Cape Verde have a wave energy potential?

In the case of Cape Verde, there is one study evaluating the wave energy potential which highlights the resource available, particularly for the northern islands, such as S#227;o Vicente. Unfortunately, the study identifies the wave resource to match that of the wind.

How will the REIUP project impact Cape Verde?

The REIUP project is expected to contribute significantly to achieving this target. In recent years, Cape Verde has made significant progress in promoting renewable energy sources. The country has been investing in wind and solar energy projects, and in 2019, inaugurated the largest solar power plant in West Africa.

Is Cape Verde a developing state?

The archipelago of Cape Verde is a developing state in West Africa with extreme external energy dependency on refined oil imports despite their available solar and wind resources. Aligned with the global energy transition, the local government established goals in 2011 aiming at 50 and 100% RES.

Cabo Verde puede autoabastecerse completamente de energ#237;a de producci#243;n propia. La producci#243;n total de todas las instalaciones de producci#243;n de energ#237;a el#233;ctrica es de 433 M kWh, lo que representa el 132% del uso propio del pa#237;s. El resto de la energ#237;a autoproducida se exporta a otros pa#237;ses o no se utiliza.
