Solar panels work using the photoelectric effect; i.e. when exposed to light, certain materials produce an electric current. This is the principle used by PV solar panels. The solar cells in the panels convert sunlight into electricity. One cell will provide limited power. Several cells connected in a panel will produce a larger amount of power.

Solar Power Plants in Uganda. ... China is the largest producer of solar power in the world, both in terms of solar panel production and installed solar capacity. According to the International Energy Agency (IEA), China accounted for more than 40% of global solar panel production in 2020, and it has consistently ranked as the world's largest ...
