

Can Palestinians achieve 10 percent of electricity production from renewable sources?

The Palestinian Energy Authority issued a renewable energy strategy in 2012 that aims to gradually achieve 10 percent of electricity production from renewable sources by the end of 2020. According to the strategy, this goal can be achieved if certain prerequisites are attained.

Why is sustainability a priority in Palestine?

In the State of Palestine, the sustainability transition is a priority because it increases access to energy to empower Palestinian communities, especially marginalized localities who suffer from energy insecurity because of adverse geopolitical reasons.

What is the energy problem in Palestine?

The energy problem in Palestine is one of many issues that affect the social and economic conditions of the Palestinian people. The fact that most of the energy is imported at relatively high prices places more financial burdens on poor and marginalized people.

How much electricity does Palestine use?

Electricity supply and demand According to the Palestinian Central Bureau of Statistics (PCBS), the total electrical energy consumption in Palestine in 2019 was reported to be 5,929.5 GWh. This quantity is almost entirely imported from outside sources, mainly from the Israel Electric Corporation (IEC), as shown in Table 1.

Where is electricity supplied in Palestine?

Table 1: Sources of Electricity in Palestine Based on Yearly Consumption (PCBS 2019). The West Bank is mainly supplied by three 161/33 kV substations: one in the south close to Hebron; another one in the central West Bank, near the town of Salfet, close to Nablus; and a third in the northern part of Jerusalem.

Does Palestine have a potential for solar power?

The Palestinian territory has a high potential for solar power generation, as it receives around 3,000 hours of sunshine per year. As a result, the Palestinian Authority is looking to attract investments in the renewable energy sector. Inauguration of the solar power plant in a school in Beit Hanina, Jerusalem.

The State of Palestine is an urbanized society with about 75 percent of its population living in urban areas. The urban development in the State of Palestine is faced with many challenges, especially the territorial and administrative fragmentation and financial constraints due to the rather weak rate of revenue collection, the ongoing political impasse ...

In fact, the cost of energy in Palestine is the highest in the region and the scarcity that growing demand has caused has had a devastating effect on the quality of life and poverty levels in the territories. ... As the population of Palestine grows, especially in dense urban zones along the Gaza strip, the Palestinian authorities will need to ...

Most of the consumed energy in Palestine comes from Israel. Meanwhile, the Israeli government controls the amount of electricity for Palestinians due to political reasons. This has led to many electricity shortages, prompting the Palestinians to invest in grid connected photovoltaic systems to mitigate electricity shortages. However, the lack of experience and ...

Energy poverty is the inability of people to have an adequate access to energy sources. It is complex and multi-dimensional problem. This paper examines both the prospects and constraints that exist in the integration of renewable energy systems that would aid in reducing poverty and promote sustainability in Palestine.

The new model, developed by the Urban Systems group within EPFL's Solar Energy and Building Physics Laboratory (LESO) in the School of Architecture, Civil and Environmental Engineering, combines ...

The profile provides a synopsis on the main urbanization trends and challenges facing the people of Palestine, and the interventions coordinated and spearheaded by UN-Habitat in partnership with local and national stakeholders to localize the Sustainable Development Goals, especially Goal 11 and the New Urban Agenda.

Most of the consumed energy in Palestine comes from Israel. Meanwhile, the Israeli government controls the amount of electricity for Palestinians due to political reasons. This has led to many electricity ...

Energy is the main player in the community's development in several aspects. Palestine is an occupied developing country which has a complicated energy sector. Renewable Energy (RE) resources are considered the optimal practical solution to mitigate or resolve the energy crisis in Palestine. Most of Palestine receives solar radiation about 3000 hours annually, and the ...
