The United Kingdom relied on fossil fuels for 40% of its electricity in 2023. Its per capita emissions were below the global average, and three times lower than in 2010. The country still relies on gas for 34% of its electricity production, but its coal phase-out is almost complete with the last remaining coal plant set to close by October 2024.

Energy plays an important role in the economic growth, development and security of any nation. Despite having abundant supply of both renewable and nonrenewable energy resources, Nigeria still experiences acute shortage of energy supply to its populace. Currently, the country depends largely on its fossil fuels derived from the Niger Delta region with attendant ...
