@MARSH\_8195 The answer is no, the Enphase battery system can't support a 3-phase load like a heat pump during a grid outage.. Even though the System Controller 3 can now support a battery on each phase, and these will all operate during an outage, the three phases will not be synchronised 120 degrees apart the way the grid is and the way a 3-phase motor requires.

Each basic structure can be designed either as a three-phase battery-backup grid or as a single-phase battery-backup grid. Single-phase battery-backup grids can be connected to three-phase utility grids. In a three-phase battery-backup system, in the event of grid failure, three SunnyIsland inverters supply all line conductors
